COMPARATIVE TRUST STATISTICS

How to use these statistics---Please read carefully

The data inside are intended to facilitate comparison of relative efficiency of trust management with funds available during the latest period. Every effort has been made to present data for that purpose. Readers should note that the data are historical and not projections of future trends. This holds especially for dividends, which vary with each quarter's earnings for most mortgage trusts and thus are not to be considered in any way as guaranteed yields.

The heart of the comparisons is annualization of current earnings and dividend rates. For mortgage trusts, this is done by multiplying the latest quarter by four without seasonal adjustment. These earnings are adjusted for conversion of debt (i.e., fully diluted) but not for exercise of warrants, as described below. For equity trusts, net cash flow (defined as earnings plus depreciation and non-cash charges minus mortgage amortization) has been used and any known seasonal factors applied. The symbol "\$" denotes use of cash flow in the earnings column. For new trusts which have not yet reported an initial quarter, zeroes are entered in the dividend and earnings columns. Group averages may be reduced to the extent new trusts are included in any given group.

The number of shares outstanding is the number issued as of the latest balance sheet and is not adjusted for conversion or exercise of warrants. Book value per share however is adjusted for conversion of all convertible debentures. It does not reflect changes for any exercise of warrants.

Four standard comparisons are presented: price changes since the last issue; price/earnings ratios and estimated dividends based upon current market prices; and the ratio of market price to book value. All values are positive unless indicated.

The fifth comparison, return on book value, measures management's performance with available funds. Because of the increasing complexity of trust capital structures, the computations are made in the following manner for trusts with these capital structures.

Convertible debentures only: Fully diluted earnings are compared with fully converted book value per share, since funds from convertibles are at work.

Warrants only: Primary earnings per share are compared with book value without assuming warrant exercise, since again this measures funds actually in use. Trusts in this category currently reporting significant differences and their primary and diluted earnings annual rates are: American Fletcher Mtg., \$2.40 and \$2.16; Unionamerica, \$2.04 and \$1.76; Cameron Brown, \$2.68 and \$2.04; Mortgage Trust of America, \$2.28 and \$1.68; First Pennsylvania, \$1.96 and \$1.72; Associated Mtg., \$2.84 and \$2.64; PNB, \$1.88 and \$1.52, Colwell, \$2.36 and \$1.80; Tri-South, \$1.92 and \$1.68; Atico, \$1.88 and \$1.48; Fidelco, \$2.64 and \$2.36; Citizens & Sou., \$2.04 and \$1.76.

Both warrants and convertibles: Fully diluted earnings and fully converted book value are used. The data for trusts in this category thus tend to understate return slightly. Trusts in this category reporting differences in their primary and diluted earnings (at annual rates) are: First Mortgage Investors, \$2.36 and \$2.08.
